

Mobile Banking for Smartphones is designed to extend your 'reach', delivering account, term deposit and loan information directly to the customer, easily and conveniently. Whether the need is for balances, transactions, inter-account transfers or bill payments, Mobile Banking gives your customers easy access.

More and more, it is the ability to reach out to the customer through electronic channels that defines your service and competitiveness. This is particularly true for those desirable high value customers, who live busy lives and want convenience. If you can support the lifestyle of the high value customer, you will be the financial institution of choice for these clients.

Of course, the youth market is 'wired' and demands that you do business with them via the devices they carry. Valuable today, these customers will be even more valuable as they mature and become major consumers of financial products.

Highgate can support your delivery strategies. Mobile Banking works with our Highgate Banking core system, but

it can be configured to work with other banking systems as well. We can help you increase your competitiveness.

Highgate Mobile Banking works on iOS, Android, Windows Mobile, and Blackberry Platforms. It is built on the RADIUS Internet Banking platform and as a result delivers the level of flexibility and security that you need to build your business.

Talk to Highgate, and you'll find that we understand your issues. We speak your language.

Call Highgate to see how our Mobile Banking solution can help your customers!
